

RSV shown to infect nerve cells, cause inflammation and damage

January 09, 2024 2:47 PM

Respiratory syncytial virus, a disease long thought to only infect the respiratory tract and a common infection in children, can also infect nerve cells and potentially cause nerve damage, according to a new study from Tulane University. (Photo by Shutterstock)

Respiratory syncytial virus (RSV), a common infection in children and senior adults, can also infect nerve cells and trigger inflammation leading to nerve damage, according to a new Tulane University [study](#). [Read more here.](#)
