The 9th Annual
Faculty Research Synergy Event

Tuesday, October 30, 2018
6:00pm - 9:00pm
Audubon Tea Room

Tulane University
School of Medicine
During tonight’s School of Medicine Faculty Research Synergy Event, you are encouraged to engage faculty and discover shared or synergistic research interests and explore concepts. Throughout the evening, you are strongly encouraged to network and engage faculty in discussion.

This “faculty research resource book” is a compilation of faculty research interests and expertise. Please feel free to use it for notes, contact information, etc.
List of faculty in attendance

Aging 6 - 7

Behavioral Health 8-10

Bioinformatics / Statistics 11-13

BioPharma Manufacturing 14

Cancer / Hematology 15-25

Cardiovascular 26-27

Endocrine / Bone 28-29

Gastroenterology 30-31

Genetics 32-34

Imaging 35

Immunology / Allergy / Skin 36-38

Infectious Diseases 39-45

Kidney / Hypertension 46-50

Lung 51-53

Medical Devices 54

Medical Education 55

Men’s Health 56

Neurosciences 57-61

Peptides Chemistry 62

Regenerative Medicine/Tissue Engineering 63-64

Stem Cell Research 65

Women’s Health 66-68

Other 69-73
Alphabetical List of Faculty in Attendance

Solange Abdulnour-Nakhoul
Murali Anbalagan
Amanda Anderson
Henry Bart
Skip Bohm
Patrick Bordnick
Stephen Braun
Bruce Bunnell
Jing Chen
YiPing Chen
Ricardo Cortez
Jill Daniel
Prescott Deininger
Paul DiCamillo
Chancellor Donald
Arnoud Drouin
Juan Duchesne
Jonathan Fadok
Corey Falcon
Vivian Fonseca
Robin Forman
Kimberly Foster

QiQi Zhou
Andrea Zsombok
Malwina Czarny-Ratajczak, PhD
Assistant Professor, Dept. of Medicine, Center for Aging
mczarnyr@tulane.edu
Identification of novel genetic and epigenetic factors contributing to development of primary osteoarthritis (OA). Next-generation sequencing approach to study exome, transcriptome and exosomal miRNAs of patients with osteoarthritis. Other Research Interests include: Genetics

S. Michal Jazwinski, MD
Professor, Medicine – General Internal
sjazwins@tulane.edu
I am interested in the study of the genetic and epigenetic risk factors underlying complex traits with emphasis on population studies and mechanistic analyses in simple model systems such as yeast. Other Research Interests include: Genetics, Neurosciences, Regenerative Medicine/Tissue Engineering

Jay Rappaport
Director and Chief Academic Officer, Tulane National Primate Research Center
jrappaport@tulane.edu
My current research focuses the role of monocytes/macrophages in immune polarization, response to infection, and the role of inflammation in HIV/SIV infection and CNS disorders. Recent work in nonhuman primates investigates the role of tryptophan catabolism in pathogenesis and the potential of NAD+ repletion in the modulation of diseases of inflammation and aging. As Director of the Tulane National Primate Research Center, I am interested in expanding the Center's portfolio into research areas in nonhuman primates beyond infectious diseases including in the acceleration of aging, the development of comorbid conditions associated with HIV/SIV and other infections, the role of inflammation in neurodegenerative and neuropsychiatric disorders, peripheral neuropathy, retinopathy, neurocognitive impairment, alzheimer's disease, diabetes, renal disease, cardiovascular disease, atherosclerosis, stroke, and gastrointestinal disorders. Other Research Interests include: Behavioral Health, Bioinformatics/Statistics, Cancer/Hematology, Cardiology, Endocrine/Bone, Gastroenterology, Genetics, Imaging, Immunology/ Allergy/ Skin, Infectious Diseases, Kidney/ Hypertension, Lung, Medical Devices, Medical Education, Men's Health, Neurosciences, Regenerative Medicine/Tissue Engineering, Women’s Health
Mimi Sammarco, PhD
Assistant Professor, Surgery
msammarc@tulane.edu
I investigate mechanisms promoting soft tissue and bone regeneration in the context of aging. I use the mouse digit regeneration model to gain a more thorough understanding of how the role of oxygen and cellular metabolism affect regeneration in an aged model in order to delineate between regeneration-competent and incompetent tissue environments. Using aging as a model to better understand regeneration will enable us to shed light on the regenerative process and to develop ways to address fracture healing and poor wound closure in the aged population. Other Research Interests include: Endocrine/Bone, Imaging, Regenerative Medicine/Tissue Engineering

Lizheng Shi, PhD
Professor, Global Health Management and Policy - SPHTM
lshi1@tulane.edu
Pharmaceutical and health care economics; pharmacoepidemiology; health care quality, access, and evaluation.

Qinyan Yin, DVM, PhD
Assistant Professor, Medicine – Pulmonary Diseases, Critical Care, and Environmental Medicine
qyin@tulane.edu
The function of RNA splicing and virus in lung biology, aging and tumorigenesis. Other Research Interests include: Cancer/Hematology, Lung
Courtney Baker, PhD
Associate Professor, Psychology - SSE
cnbaker@tulane.edu
My primary research interests include dissemination and implementation research, prevention and early intervention, mental health, violence prevention, early childhood, underserved populations, and community-based participatory research.

Patrick Bordnick, PhD
Dean, School of Social Work
bordnick@tulane.edu
Dr. Bordnick has over twenty years of experience in clinical and laboratory research on cocaine, marijuana, alcohol, amphetamine, heroin, and nicotine addiction. Research interest areas include clinical medication trials, treatment development, human laboratory studies, behavioral disorders, health/behavioral health, virtual reality, and mobile data collection. Other Research Interests include: Virtual Reality Treatment of Addiction

Paul Colombo, PhD
Associate Professor, Psychology - SSE
pcolomb@tulane.edu
My research includes: To elucidate the neuronal mechanisms of memory formation with emphasis on the roles of signaling proteins, including kinases, phosphatases, and transcription factors. The second aim is to test hypotheses regarding independence or interactions among multiple memory systems. The third aim is to apply results of studies of the neuronal mechanisms of memory formation to studies of age-related memory impairment under normal (e.g. non-pathological) aging conditions. Other Research Interests include: Aging, Neurosciences

Lorelei Cropley, Dr.PH
Associate Professor, Undergraduate Public Health Studies – SPHTM
lcropley@tulane.edu
Efficacy of Short Term Brigades, Iron deficiency anemia behavioral interventions using iron cookware, Chagas Disease KAP studies. Other Research Interests include: Infectious Diseases
Thomas LaVeist, PhD
Dean, School of Public Health and Tropical Medicine
tal@tulane.edu
Dr. LaVeist's research and writing has focused on three broad thematic research questions: 1) What are the social and behavioral factors that predict the timing of various related health outcomes (e.g. access and utilization of health services, mortality, entrance into nursing home? 2) What are the social and behavioral factors that explain race differences in health outcomes?; and 3) What has been the impact of social policy on the health and quality of life of African Americans? His work includes both qualitative and quantitative analysis. LaVeist seeks to develop an orienting framework in the development of policy and interventions to address race disparities in health-related outcomes. Specific areas of expertise include: U.S. health and social policy, the role of race in health research, social factors contributing to mortality, longevity and life expectancy, quantitative and demographic analysis and access, and utilization of health services.

Mary Margaret Gleason, MD
Associate Professor, Psychiatry – Child Psychiatry
mgleason@tulane.edu
My primary academic and clinical interests are in early childhood mental health and primary care mental health. I am increasingly interested in factors that influence access to care and utilization of services, but also interested in vulnerable populations and those exposed to significant adversity.

Michael Hoerger, PhD
Assistant Professor, Psychology - SSE
mhoerger@tulane.edu
I conduct research in psycho-oncology. Using a translational perspective, he draws upon fundamental behavioral science to anticipate, prevent, and alleviate the stress of cancer. Other Research Interests include: Aging, Bioinformatics/Statistics, Cancer/Hematology, Lung, Medical Education, Men’s Health, Women’s Health

Damian R. Murray, PhD
Assistant Professor, Psychology – SSE
dmurray4@tulane.edu
My research investigates the implications of real and perceived disease threat for social behavior, personality, and cross-cultural differences. He also investigates the relationships between genetic markers of vulnerability to disease and disease-avoidant behavior. Other Research Interests include: Genetics, Infectious Diseases
BEHAVIORAL HEALTH

Leia Saltzman, PhD
Assistant Professor, School of Social Work
lsaltzman@tulane.edu
My research explores the impact of psychological trauma on mental and physical health outcomes. I am particularly interested in sex differences over time. Other Research Interests include: Women’s Health, Other – Psychological trauma and traumatic grief

Michael S. Scheeringa, MD, MPH
Professor, Psychiatry and Behavioral Sciences
mscheer@tulane.edu
Psychopathology in infant and preschool children; autonomic heart period control; electroencephalography; cortisol regulation; parent-child relationship quality; treatment for young children. Other Research Interests include: Neurosciences

Jylana L. Sheats, PhD, MPH
Assistant Professor, Global Community Health & Behavioral Sciences – SPHTM
jsheats@tulane.edu
My research interests focus on the identification and examination of individual, social, contextual, environmental (built, food), and policy-related determinants of obesity and chronic disease among vulnerable populations (low-income, racial/ethnic minorities, older adults). Other Research Interests include: Aging, Women’s Health

Ashley Wennerstrom, PhD, MPH
Assistant Professor, Medicine – General Internal Medicine
awenners@tulane.edu
I use community-academic partnered methods to address a wide variety of community health concerns including intimate partner violence, behavioral health, health care for formerly incarcerated individuals. Other Research Interests include: Women’s Health

Charley Zeanah, MD
Professor, Psychiatry and Behavioral Sciences
czeanah@tulane.edu
My research has focused on children coping with extremes of caregiving adversity and their outcomes across a range of behavioral, brain and cognitive outcomes. In particular, I have focused on the effects of excessive unwanted input (i.e., trauma) and the effects of inadequate expected input (i.e., deprivation and neglect). I have studied early childhood disorders, especially posttraumatic stress and attachment disorders in children who have been maltreated or raised in conditions of deprivation.
BIOINFORMATICS AND STATISTICS

Loren Gragert, PhD
Assistant Professor, Pathology and Laboratory Medicine
lgragert@tulane.edu
My lab focuses on population genetics and informatics in transplantation. Our main project involves translating datasets and tools originally developed for bone marrow transplant matching into the field of solid organ transplantation. We also develop statistical genetics methodologies for disease association and evolutionary biology studies, focusing on the highly polymorphic HLA and KIR immune gene systems. Other Research Interests include: Immunology/Allergy/Skin, Other - Transplantation

Mac Hyman, PhD
Professor, Mathematics – SSE
mhyman@tulane.edu
My research is the development and application of mathematical models based on the underlying disease transmission mechanisms to help the medical/scientific community understand and anticipate the spread of an epidemic and evaluate the potential effectiveness of different approaches for bringing the epidemic under control. My current research is focused on vector-borne diseases, such as dengue fever, malaria, chikungunya, and West Nile Virus. Other Research Interests include: Infectious Diseases, Other – Mathematical models for the spread of infectious diseases

Michelle Lacey, PhD
Associate Professor, Mathematics – SSE
mlacey1@tulane.edu
My primary research interests are in epigenetic modeling and analysis and in phylogenetics, and I also have extensive experience in the analysis of data generated by high throughput experiments. Other Research Interests include: Genetics

Yao-Zhong Liu, PhD
Associate Professor, Global Biostatistics and Data Science – SPH
yliu8@tulane.edu
My research is focused on RNA-seq and other genomics data analysis. My recent research involves RNA-seq analysis of lung epithelial cells for toxicological effects of oil spill products. I'm now extending this research to mouse models. I'm also collaborating with other investigators in RNA-seq based research, such as virus interactome with humans, transcriptomic analysis of Trypanosoma cruzi (the parasite causing Chagas disease) and RNA-seq of stem cells for their survival outcome. Other Research Interests include: Endocrine/Bone, Genetics, Lung
Ramgopal Mettu, PhD  
Associate Professor, Computer Science – SSE  
rmettu@tulane.edu  
My work is at the intersection of algorithms, machine learning and computational biology. Applications of my work include protein structure prediction and determination, protein-protein interactions, compound screening, as well as problems in high-throughput sequencing and proteomics. Other Research Interests include: Genetics, Immunology/Allergy/Skin

Tianhua (Tim) Niu, PhD  
Assistant Professor, Biochemistry and Molecular Biology  
tniu@tulane.edu  
My long-term research interests mainly consist of four areas: (1) biostatistical methodology (e.g., Bayesian statistics and machine learning), (2) statistical genetics (e.g., Bayesian haplotype inference and computational molecular evolution), (3) transcriptome analysis (e.g., differential expressions of mRNAs and non-coding RNAs) and bioinformatics (e.g., software design, development, and application for integrative analysis of genomics, transcriptomics and proteomics data using a variety of pathway and network software tools, e.g., R & Bioconductor packages), and (4) clinical trials (clinical trial design, development of clinical trial protocol, conduct, data management, and data analysis). Other Research Interests include: Genetics

Brian Summa, PhD  
Assistant Professor, Computer Science – SSE  
bsumma@tulane.edu  
My research focuses on the design of scalable algorithms for the interactive exploration, visualization, segmentation, and analysis of large data. Recent medical applications of my work include: the visualization and registration of large 2-photon, electron, and confocal microscopy scans; automatic and semi-automatic neural pathway tracing; understanding and quantifying the uncertainty in medical image segmentation; and visualization and analysis of large digital pathology slides. Other Research Interests include: Cancer/Hematology, Neurosciences

Sudesh K. Srivastav, PhD  
Professor, Global Biostatistics and Data Science – SPHTM  
ssrivas@tulane.edu  
Any biostatistics and quantitative bioinformatics applications in biological and public health data – range from design issues (including sample and power analysis) to statistical analysis of the study. Other Research Interests include: Genetics
Yu-Ping Wang, PhD
Professor, Biomedical Engineering – SSE
wyp@tulane.edu
Integration of multiscale and multimodal imaging and genomic data. Biomedical image processing, statistical and computational modeling, and analysis of biomedical data. Other Research Interests include: Genetics, Neurosciences, Behavioral Health

Carola Wenk, PhD
Professor, Computer Science – SSE
cwenk@tulane.edu
My research area is in computational geometry, with a focus on analyzing discrete geometric shapes. I have strong interests in interdisciplinary applications including biology and medicine. I am interested in learning about the potential to collaborate on geometric data analysis problems for biomedical data, including medical imaging data. One of my current projects involves developing topological descriptors that capture architectural features of prostate glands in pathology images. Other Research Interests include: Imaging, Other - Algorithms
A major project that I am now working on is in the exploitation of lipid self-assembly to induce transcutaneous vaccine delivery. Biological lipids and synthetic surfactants) is essential in technologies as mundane as consumer detergent products, and technologies of the future as in the development of structured, responsive nanomaterials. Biological membranes are ubiquitous examples of lipid-self assembly that impacts the entire function of a cell. Other Research Interests include: Cancer/Hematology, Infectious Diseases, Medical Devices.

My lab works on the development and application of advanced synthetic biology tools for model and non-model microbes for the purpose of sustainable fuel and chemical production. This includes the efficient use of directed evolution to engineer such microbes from the gene to genome level as well as high throughput tools for analysis and engineering such as DNA synthesis, next generation sequencing, and cell sorting.
Asim Abdel-Mageed, DVM, PhD
Professor, Urology
amageed@tulane.edu
My research interest focuses on identifying molecular determinants of prostate cancer progression, with special emphasis on health disparity. One approach involves genetic engineering and selective delivery of stem cells to target “intracrine” production of androgens at metastatic sites. Other Research Interests include: Stem Cell Research

Muralidharan Anbalagan, PhD
Assistant Professor, Structural and Cellular Biology
manbalag@tulane.edu
Breast Cancer Research, Circadian Rhythm, and Bone Metastasis
Other Research Interests include: Endocrine/Bone

Pedro Barata, MD
Assistant Professor, Medicine – Hematology/Medical Oncology
pbarata@tulane.edu
I am a medical oncologist and physician researcher in with a special interest in genitourinary tumors (prostate, kidney and bladder cancers) and clinical trials

Diane Blake, PhD
Professor, Biochemistry and Molecular Biology
blake@tulane.edu
My laboratory has expertise in antibody engineering and the development of new antibodies with novel binding activities for use as diagnostics and therapeutics. We also work with an interdisciplinary team to develop biodegradable drug delivery devices for treatment of glioblastoma and for control of fibrosis during the wound healing process.

David E. Blask, PhD, MD
Professor, Structural and Cellular Biology
dblask@tulane.edu
My research interest is in the circadian/melatonin regulation and circadian disruption by light at night of cancer growth and metabolism.
Estrogen receptor, cell signaling and cancer systems. One of our goals is to elucidate the altered activation of signaling cascades which target estrogen receptor mediating gene expression which ultimately leads to a hormone independent and endurance therapy resistant phenotype. We are collaborating with other laboratories to study natural and artificial phytochemicals as novel anti-estrogenic and anti-resistance agents through coordinate targeting of ER-activity, cell signaling and coactivator function. We have begun to study the role played by microRNAs (miRNA) in estrogen receptor biology and the specific regulation of gene expression by steroid hormone receptors.

Breast Cancer long-term objectives of 1- identifying molecular mechanisms of breast cancer resistance and metastasis 2- implementing novel therapeutic strategies that can target and overcome altered gene networks involved in controlling breast cancer progression and 3- driving the translation of the laboratory science to the clinical patient setting. More recently we have focused on the role of novel experimental agents and epigenetic therapy in the regulation of microRNA expression in breast cancer with specific interest in triple-negative or basal phenotype breast cancer.

My research focuses on the application and clinical translation of quantitative optical spectroscopy and imaging tools for the improvement of cancer management. We develop translatable optical methods to directly address gaps in clinical care, and carry those through to clinical validation in humans alongside our interdisciplinary collaborators. A major theme in this work is the use of novel imaging devices (and computational analysis tools) to improve patient outcomes in surgical tumor removal in organs such as the breast, prostate, & kidney. We also develop tools & strategies using optics to answer interesting biological questions in cell and animal models. To achieve these goals, we leverage new & existing photonic technologies across multiple spatial scales such as quantitative diffuse reflectance spectroscopy and imaging (DRS, DRI), fluorescence lifetime imaging, structured-illumination microscopy (SIM), and light sheet microscopy (LSM).
Endoplasmic reticulum (ER-stress)/ unfolded protein response plays an important role in various forms of liver diseases related to viral and non-viral etiologies. My laboratory investigates basic mechanism how ER-stress/UPR stress response in the liver improves cell survival pathway by inhibiting cellular apoptosis and cellular autophagy that leads to development of hepatocellular carcinoma and exosome release. We are using this exosome based platform to measure stress exosomes as a serum biomarker for early prediction of liver cancer (hepatocellular carcinomas) among patients with liver cirrhosis. Other Research Interests include: Gastroenterology, Infectious Diseases

Prescott Deininger, PhD
Professor, Cancer Center
pdeinin@tulane.edu
I am interested in the role that mobile elements play in mutagenesis within the human genome. This involves studies of their mutational capabilities, toxicity and the cellular response to their expression. Many studies involve DNA repair pathways, including nucleotide excision repair, mismatch repair and recombination. My laboratory specializes in high throughput molecular genetics techniques and applications. Other research interests include: Genetics

Chancellor Donald, MD
Assistant Professor, Medicine – Hematology and Medical Oncology
cdonald@tulane.edu

Yan Dong, PhD
Professor, Structural & Cellular Biology
ydong@tulane.edu
Our research is focused on prostate cancer, particularly in altered androgen receptor signaling in castration-resistant prostate cancer and mechanisms and efficacies of candidate prostate cancer interventions. hormone therapy, and 3) increase chemotherapeutic efficacy for triple-negative breast cancer. I am also interested in studying the mechanism of resistance of prostate cancer to hormone therapy as well as the mechanism of prostate cancer progression induced by circadian disruption.
CANCER / HEMATOLOGY

Corey Falcon, MD
Assistant Professor – Pediatrics
cfalcon@tulane.edu
Clinical and translational research in sickle cell, thrombosis, and bleeding disorders

Mark J. Fink, PhD
Professor, Chemistry – SSE
fink@tulane.edu
Synthesis and Properties of Semiconductor Nanoparticles. Our group, in collaboration with Brian Mitchell (Chemical Engineering), is active in the synthesis of silicon nanoparticles and quantum dots. Silicon nanoparticles have great potential as non-toxic luminescent biomarkers and multimodal drug delivery agents. Other Research Interests include: Immunology/Allergy/Skin

Paul Friedlander, MD
Associate Professor and Chair, Otolaryngology
pfriedla@tulane.edu
Racial disparity in healthcare; Tumor growth and wound healing as well as outcome analysis for at risk populations for head and neck cancer.

Scott Grayson, PhD
Professor, Chemistry – SSE
sgrayson@tulane.edu
We investigate the role of polymer carrier architecture in optimizing physical (and hence pharmacokinetic) properties. We have projects which target aqueous soluble, bloodborne carriers, transdermal carriers, and gene transfection carriers. Other Research Interests include: Immunology/Allergy/Skin
Jeff Han, MD, PhD
Assistant Professor, Biochemistry and Molecular Biology
jhan5@tulane.edu
Retrotransposition in the germ line L1s are transposons that are expressed in the germ line of mammals. These mobile genetic elements replicate by transcribing their RNA, and then reverse transcribing this RNA into new DNA at a different chromosomal site. Since L1 replication involves chromosome breakage, we expect that excessive L1 activity can be disastrous to host genome integrity. Indeed, loss of transposon control pathways by mutation is associated with massive L1 expression, germ cell death, and sterility. This has obvious significance for fertility research. We have identified genetic pathways important for the activity of L1. We are also screening small drug-like compounds for inhibitory activity against L1. We hope to use these finding to assess the effects of blocking L1 activity genetically or with drugs on infertile mouse models that over express L1. We also would like to examine whether elevated L1 expression is overrepresented in human patients with infertility of unknown etiology. Other Research Interests include: Aging, Genetics, Men’s Health, Women’s Health

James Jackson, PhD
Assistant Professor, Biochemistry and Molecular Biology
jjacks8@tulane.edu
My lab is interested in the therapeutic response of breast cancers. Specifically, we aim to determine why some tumors relapse more quickly than others and also what cells in a heterogeneous tumor eventually proliferate to cause the relapse. We are investigating the role of p53 mediated cellular senescence in driving relapse. We use transgenic mouse models, ex vivo lentiviral infection, orthoptopic transplantation in syngeneic mice, and tissue culture model systems. Other Research Interests include: Aging, Genetics

Janarthanan Jayawickramarajah, PhD
Professor, Chemistry – SSE
jananj@tulane.edu
My research focuses on the synthesis of designer molecules and nanoparticles that have the unique ability to undergo specific self-assembly and molecular recognition events. In particular, we are using these systems to generate protein inhibitors that are activated by endogenous biomarkers (including over-expressed microRNAs and enzymes).
Shanker Japa, PhD
Associate Professor, Medicine
japashan@tulane.edu
Coenzyme-Q10 as an Adjunct to Standard Therapies in Elderly Patients with Chronic Heart Failure and Type 2 Diabetes. Other Research Interests include: Cardiology, Infectious Diseases

Marc J. Kahn, MD, MBA
Professor, Medicine – Administration
mkahn@tulane.edu
Medical Education—outcomes and evaluation of new programs financing the Academic Medical Center—costs, value, and funding of programs. Ethics and end of life care, and benign hematology

Emad Kandil, MD
Professor, Surgery
ekandil@tulane.edu
Therapeutic Targeting of the MAP Kinase and PI3K Pathways in Thyroid Cancer. Other Research Interests include: Endocrine/Bone

Jordan Karlitz, MD
Associate Professor, Medicine - Gastroenterology
jkarlitz@tulane.edu
I am interested in Lynch syndrome screening practices by tumor analysis for microsatellite instability (MSI) and immunohistochemistry (IHC) testing in young colorectal cancer patients. I am also interested in surgical practices in young colorectal cancer patients (extent of colonic resection). Finally, I am interested in colorectal cancer risk in the Cajun population. We recently demonstrated that the Acadian parishes of Louisiana have one of the highest rates of colorectal cancer in the U.S. I am currently the PI on a LA CaTS pilot grant that focuses on performing MSI and IHC testing on banked tumor specimens in Cajun patients to look for evidence of Lynch syndrome (founder effect in Cajun population). Other Research Interests include: Gastroenterology, Genetics
Damir Khismatullin, PhD
Associate Professor, Biomedical Engineering – SSE
damir@tulane.edu
My laboratory focuses on understanding the mechanical and transport properties of biological systems at cellular and tissue levels. Using experimental and theoretical approaches, we study the interactions of blood cells (leukocytes, platelets, red blood cells), tissue resident cells (macrophages, mast cells), and circulating tumor cells with vascular and lymphatic endothelium under pathophysiological conditions such as inflammation, atherosclerosis, thrombosis, sickle cell disease, and cancer metastasis. Another aspect of our research is the development of medical ultrasound technologies for cancer treatment, blood coagulation monitoring, and nerve regeneration. We also develop novel methods for rheological characterization of living cells and tissues and use our state-of-the-art computational fluid dynamics models to predict blood flow in vessels with complex geometry. Other Research Interests include: Immunology/Allergy/Skin, Neurosciences

L. Spencer Krane, MD
Assistant Professor, Urology
lkrane1@tulane.edu
I currently am focused on biomarker development, particularly in Kidney cancer. We’re also interested in prostate cancer treatment and outcomes and other urologic malignancies. Other Research Interests include: Genetics, Men’s Health

Sean B. Lee, PhD
Associate Professor, Pathology and Laboratory Medicine
slee30@tulane.edu
My research interests are in cancer and development. Specifically, we study cancers that involve EWS (Ewing sarcoma) gene as an oncogenic translocation gene product using knock-in mice. We are also interested in studying the functions of EWS in development. We have recently uncovered a novel role for EWS in determining brown fat lineage during development. We are planning to further study the role of EWS in metabolism (e.g. diabetes and obesity). Other Research Interests include: Endocrine/Bone
I am particularly interested in two DNA tumor viruses: Human papillomavirus (HPV) and the Epstein-Barr virus (EBV). In our research we try to utilize both sequencing based informatics approaches and traditional wet-lab methods to investigate the pathological role of these viruses in cancer development (e.g. lung cancer, nasopharyngeal carcinoma, etc.). Meanwhile, I am also interested in clinical translational research and try to develop new therapeutic approaches to treat virus-associated cancers. Other Research Interests include: Bioinformatics/Statistics, Genetics, Infectious Diseases, Lung

Hong Liu, PhD  
Assistant Professor, Biochemistry and Molecular Biology  
hliu22@tulane.edu  
To understand how genetic information is properly transmitted through generations and also apply the knowledge to understand the causes of human diseases, such as cancer. Other Research Interests include: Aging, Other – Genome stability

Hua Lu, MB, PhD  
Professor and Chair, Biochemistry and Molecular Biology  
hlu2@tulane.edu  
Molecular dissection and translational research of the p53 and c-myc networks in controlling cell growth, senescence, death, differentiation, and tumorigenesis as well as anti-cancer drug discovery.

Arthur J. Lustig, PhD  
Professor, Biochemistry and Molecular Biology  
alustig@tulane.edu  
We are studying the multiple chromatin structures that lead to heritable telomere states. We are also interested in applying our new insights into telomere chromatin to rapidly diagnose telomere diseases. Other – Aging, Genetics

Heather Machado, PhD  
Assistant Professor, Biochemistry and Molecular Biology  
hmachado@tulane.edu  
My laboratory focuses on understanding how infiltrating macrophages promote breast cancer initiation and progression. Other Research Interests include: Women’s Health
Charles Miller, PhD  
Professor, Environmental Health Sciences  
rellim@tulane.edu  
I study adverse effects of chemicals in molecular, cellular, and animal model systems. I am particularly interested in chemicals that interact with the aryl hydrocarbon receptor signaling pathway.

Debasis Mondal, PhD  
Associate Professor, Pharmacology  
dmondal@tulane.edu  
We are looking at the role of drug-efflux transporters (e.g. P-gp) and drug-metabolizing enzymes (Cyp3A) in drug pharmacokinetics and antiviral efficacy. We are focusing on the role of these host factors in facilitating viral persistence in subvascular reservoirs, e.g. brain & GI submucosa. Several pharmacological inhibitors are being tested as combination therapy to increase antiviral efficacy in reservoirs. We are also investigating whether these factors are upregulated in viral reservoirs and whether a gene therapy approach can be implemented to suppress their induction, thus enabling therapeutic levels of drugs to enter. Other Research Interests include: Infectious Diseases

Krishnarao Moparty, MD  
Professor, Urology  
kmopart@tulane.edu  
My research has been in the field of prostate cancer, especially molecular biology and active surveillance. Other Research Interests include: Men’s Health

Reinhold Munker, MD  
Professor, Medicine – Hematology/Medical Oncology  
rmunker@tulane.edu  
Basic Science: Non-coding RNAs, new cell lines, apoptosis  
Clinical Science: Benign and malignant hematology, second malignancies, stem cell transplantation, immunotherapy. Other Research Interests include: Immunology/Allergy/Skin, Lung, Stem Cell Research

Zachary Pursell, PhD  
Associate Professor, Biochemistry and Molecular Biology  
zpursell@tulane.edu  
My research focuses on the regulation of DNA replication and how it relates to genome instability and human diseases, in particular the development of cancer.
Brian G. Rowan, PhD
Associate Professor and Chair, Structural & Cellular Biology
browan@tulane.edu
1. Estrogen receptor phosphorylation: understanding the role of estrogen receptor alpha (ERα) phosphorylation in regulating receptor function in normal and cancer tissue. 2. Experimental therapeutics for breast cancer: using peptidomimetic Src inhibitor in combination with endocrine and chemotherapy for breast cancer; novel bone targeted parathyroid hormone antagonists for bone metastatic breast cancer. 3. Circadian regulation of estrogen receptor function: understanding the reciprocal regulation of the circadian rhythm and estrogen receptor in physiologic processes. 4. Adipocyte tissue-derived stromal/stem in reconstructive surgery and soft tissue repair: understanding the mechanisms by which ASCs promote head/neck cancer metastasis; the impact of ASCs in a low oxygen environment on fibrosis and immunomodulation. Other Research Interests include: Endocrine/Bone

Nakhle Saba, MD
Associate Professor, Medicine – Hematology/Oncology
nsaba@tulane.edu
Translational research in Chronic Lymphocytic Leukemia and Mantle Cell Lymphoma: disease biology and novel therapies.

Oliver Sartor, MD
Professor, Medicine - Hematology & Medical Oncology
osartor@tulane.edu
My current research interests include clinical trials in advanced prostate cancer with novel agents and novel combinations of agents. My collaborative projects include novel concepts in prostate stem cells and germ line assessment of prostate cancer risk. Other Research Interests include: Men’s Health

Jonathan Silberstein, MD
Assistant Professor, Urology
jsilbers@tulane.edu
I am a Urologic oncologist and am interested in all facets of genitourinary malignancy. Recently I have begun to get very interested in using 3-D printing of two dimensional cross sectional imaging to create a 3-D model of various tumors to aid in surgical planning and potentially robotic extirpation.
CANCER / HEMATOLOGY

Tong Wu, MD, PhD
Professor, Pathology and Laboratory Medicine
twu@tulane.edu
My research centers on the molecular mechanisms of inflammation and carcinogenesis, with a special emphasis on the pathogenesis of liver cancer and inflammatory liver diseases. My additional research interests include mechanisms of liver injuries, regulation of hepatobiliary epithelial cell growth and clinical/translational research on human liver cancer and liver diseases. Other Research Interests include: Gastroenterology, Other – Liver Pathobiology

Zongbing You, MD, PhD
Associate Professor, Structural & Cellular Biology
zyou@tulane.edu
Primarily study inflammation/immune responses in prostate cancer and lung cancer, focusing on interleukin-17. Secondarily study tissue engineering of articular cartilage using adipose tissue-derived stem cells transfected with doublecortin gene (DCX). Other Research Interests include: Aging, Immunology/Allergy/Skin, Lung, Regenerative Medicine/Tissue Engineering, Stem Cell Research

Shelya Zeng, MD
Research Professor, Biochemistry and Molecular Biology
szeng@tulane.edu
Molecular dissection and translational research of the p73 and c-myc networks in controlling cell growth, senescence, death, differentiation, and tumorigenesis.

Qiuyang (Lisa) Zhang, PhD
Assistant Professor, Structural & Cellular Biology
qzhang3@tulane.edu
I am interested in inflammaging (both aging and inflammation) and cancer, with a focus on Th17 cytokines and prostate cancer in the aging process. I am using genetically engineered mouse models to address the role of Th17 cytokines in the aging process. Also of interest is the role that Th17 cytokines play in the development of prostate cancer. Other Research Interests include: Aging, Immunology/Allergy/Skin, Other – Male Reproduction
CARDIOVASCULAR

Jiang He, MD, PhD
Professor and Chair, Epidemiology – SPHTM
jhe@tulane.edu
Omens, clinical, and epidemiological research in cardiometabolic diseases. Other Research Interests include: Genetics, Kidney/Hypertension

Robert Hendel, MD
Professor, Medicine – Cardiology
rhendel@tulane.edu
My personal research has been in cardiac imaging (nuclear cardiology and cardiac CT), as well as the appropriate use of cardiovascular technology. Our section has interest in population health, obesity, and medical devices. Other Research Interests include: Imaging, Medical Education

Shengxu Li, MD, MPH, PhD
Assistant Professor, Epidemiology – SPHTM
sli10@tulane.edu
My research focuses on etiology of obesity, type 2 diabetes, and cardiovascular disease.

Stryder Meadows, PhD
Assistant Professor, Cell and Molecular Biology - SSE
smeadows@tulane.edu
My lab is focused on understanding the genetic pathways involved in regulating embryonic and retinal blood vessel development. In particular, we are interested in blood vessel fusion and artery-vein identity. Other Research Interests include: Genetics

Tracy Parker, BSN, MBBS
Instructor, Medicine - Cardiology
tparker7@tulane.edu
Ambulatory Blood Pressure Monitoring
Ibolya Rutkai, PhD
Assistant Professor, Pharmacology
irutkai@tulane.edu
My research focuses on the role of the estrogen-mitochondria-mediated regulation of cerebral vascular function before and after ischemia-reperfusion. Other Research Interests include: Neurosciences, Women’s Health

Thomas Cooper Woods, PhD
Associate Professor, Physiology
twoods3@tulane.edu
ENDOCRINE / BONE

Charles Billings, MD
Assistant Professor, Orthopaedics
cbillin1@tulane.edu
Topical use of tranexamic acid to reduce blood loss in total joint replacements

Vivian Fonseca, MD
Professor, Medicine - Endocrinology and Metabolism
vfonseca@tulane.edu
The prevention and treatment of diabetic complications and risk factor reduction in cardiovascular disease. I am currently evaluating inflammation as risk factors for heart disease in diabetes. I am an investigator in the NIH-funded (ACCORD) study and its follow up ACCORDION) and Action to Control Cardiovascular Risk in Diabetes serve on the Glycemic control and ancillary studies committees. I am conducting clinical trials in diabetic nephropathy and evaluating biosimilar insulins.

Muthusamy Kunnimalaiyaan, PhD
Assistant Professor, Surgery
mkunni@tulane.edu
Research focuses on identification of biomarkers, targets based on signal transduction pathways, and repurposing drugs. Other research interests include: Cancer/Hematology

Franck Mauvais-Jarvis, MD, PhD
Professor, Medicine - Endocrinology and Metabolism
fmauvais@tulane.edu
We are interested in novel mechanisms and/or therapeutic perspectives for diabetes and of obesity especially as it relates to the role of estrogen and androgen in metabolic diseases. We seek to find novels ways to modulate estrogen and androgen actions in a tissue- and sex-specific manner to prevent/improve diabetes and metabolic dysfunction.

Fernando L. Sanchez, MD
Associate Professor, Orthopaedics
fsanchez@tulane.edu
My area of research interest includes orthopaedic clinical outcomes especially total joint and adult reconstruction. I am currently interested in doing further research in wear debris associated with bone loss and osteoarthritis.
Robert Galagan, MD  
Assistant Professor – Medicine – Endocrinology  
rgalagan@tulane.edu  
Dr. Galagan’s research interests include hospital treatment of diabetes mellitus, transitioning in-patients with diabetes to outpatient care and the treatment of diabetic peripheral neuropathy.

Felix Savoie, MD  
Professor and Chair, Orthopaedics  
fsavoie@tulane.edu  
My research interests include chondrolysis in articular cartilage, advances in arthroscopy of the upper extremity, improvements in arthroscopic and open repair techniques of the upper extremity, and sports medicine. I have been co-PI on a series of studies investigating the interrelationship of time, temperature and intra-articular anesthetic injections in chondrolysis. Other Research Interests include: Aging

Michael Serou, MD  
Assistant Professor, Radiology  
mserou2@tulane.edu  
I have a general interest in applying advanced imaging to medical research. Current projects include quantitative CT assessment of bone mineral density in an evaluation of epigenomic contributions to male osteoporosis. Other Research Interests include: Genetics, Imaging

Hongju Wu, PhD  
Associate Professor, Medicine - Endocrinology and Metabolism  
hwu3@tulane.edu  
My research has been focused on exploring novel strategies for diabetes treatment and investigating the underlying mechanisms. We have two major projects: 1) To explore novel strategies to protect and to regenerate the insulin-producing β-cells; and 2) To investigate the role of GLP-1/GLP-1 receptor in regulating glucagon secretion. Other Research Interests include: Imaging, Regenerative Medicine/Tissue Engineering
Solange Abdulnour-Nakhoul, PhD
Associate Professor, Medicine - Gastroenterology
solange@tulane.edu
My research is in physiology and biology of the esophagus (stratified squamous epithelium and glands), Reflux disease, and Eosinophilic Esophagitis. Other Research Interests include: Kidney/Hypertension

Arnaud Drouin, MD
Assistant Professor, Medicine – Gastroenterology
adrouin@tulane.edu
Expression of mu opiate receptor and microRNA in various models of irritable bowel disease in rat/mouse by dual immunohistochemistry and in situ hybridization on frozen sections in colon/spinal cord. Other Research Interests include: Cancer/Hematology, Imaging, Neurosciences

Martin Moehlen, MD, MPH
Assistant Professor, Medicine - Gastroenterology & Hepatology
mmoehle@tulane.edu
I am specifically interested in using the VA database to answer clinically relevant questions within hepatology: descriptive analysis of viral hepatitis (treatment of monoinfected hepatitis C and hepatitis C-HIV coinfection in VA versus "real world"); hepatocellular carcinoma - treatment practices and access to care. The inter-relationship between treatment of hepatitis C with newly available direct antiviral agents and effect on diabetes related outcomes.

Anil Paramesh, MD
Professor, Surgery – Abdominal Transplant
aparamesh@tulane.edu
Other Research Interests include: Immunology/Allergy/Skin
George N. Verne, MD
Professor and Chair, Department of Medicine
gverne@tulane.edu
Our area of research focuses on translational research-from bench to bedside. The overall goal of our laboratory has been to examine the neurobiological mechanisms of post-inflammatory altered enteric neuropathy following enteric infections. Our lab has reported aberrant, non-coding RNA signaling pathways in both patients and animal models of visceral enteric nociception. We are currently using small molecule modulators (miRNA mimetics & inhibitors) in vivo to develop targeted therapies for enteric neuropathy.

QiQi Zhou, MD, PhD, MBA
Associate Professor, Medicine
gzhou2@tulane.edu
GENETICS

Hans C. Andersson, MD
Professor and Director, Hayward Genetics Center
handers@tulane.edu
The Hayward Genetics Center follows the majority of inherited metabolic patients in the Gulf South Region (>200pts) which diseases are rare and have a poor evidence base. Our efforts have been to characterize the natural history and responses to therapy for these metabolic disorders. We have described the first long-term treatment outcomes for cobalamin C disease and pediatric Gaucher Disease. We are currently trying to understand the neurologic basis for changes in behavior and executive function in phenylketonuria patients treated with tetrahydrobiopterin. Through a regional genetics collaborative, we are developing a strategic plan for emergency preparedness as a model for genetics centers and genetic laboratories to follow.

YiPing Chen, PhD
Professor and Chair, Cell and Molecular Biology - SSE
ychen@tulane.edu
My research focuses on genetic regulation of organ formation and pathogenesis, particularly in craniofacial and cardiac development using transgenic/knockout mouse models.

Laurie R. Earls, PhD
Assistant Professor, Cell and Molecular Biology - SSE
learls@tulane.edu
I am interested in how the molecular pathways that modulate synaptic plasticity change with age, and how this confers selective vulnerability to disease onset. For example, we have previously shown that microRNAs that do not target calcium stores early in development are critical for modulation of the SERCA calcium pump in early adulthood. This results in age-dependent alterations in synaptic plasticity in models of the 22q11 Deletion Syndrome, the major genetic risk factor for schizophrenia. Additionally, we have discovered a novel peptide encoded in the 22q11DS disease-critical region that affects synaptic plasticity in an age-dependent manner. We use genetics, molecular biology, and electrophysiology to study the effects of these pathways on neural function with age. Other Research Interests include: Aging, Neurosciences
Melanie Ehrlich, PhD  
Professor, Human Genetics Program  
ehrich@tulane.edu  
My lab is using epigenomics and epigenetics to elucidate differentiation of the skeletal muscle, bone, and cardiovascular lineages and abnormal changes in epigenetics associated with disease, especially cancer, muscle disease, osteoporosis, and heart disease studies of normal tissue, we are particularly interested in how the skeletal muscle-specific and brain-specific epigenetics fine tunes transcription. Other Research Interests include: Bioinformatics/Statistics, Cancer

Fenglei He, PhD  
Assistant Professor, Cell and Molecular Biology – SSE  
fhe@tulane.edu  
Neural crest cells comprise a transient, highly migratory and multi-potent population. Arising at early stage of embryo development, they play essential roles in organ morphogenesis and homeostasis. My research interest lies in understanding fundamental mechanisms of neural crest cell development and related diseases using mouse models. Our current projects focus on dissecting the role of growth factor signaling and downstream pathways in development of cranial neural crest cells and their skeletal derivatives. Other Research Interests include: Regenerative Medicine/Tissue Engineering

Enrique Palacios, MD  
Professor, Radiology  
epalaci@tulane.edu  
Vascular. Other Research Interests include: Aging

Shusheng Wang, PhD, MBA  
Associate Professor, Cell and Molecular Biology – SSE  
swang1@tulane.edu  
(1) Noncoding RNAs in vascular development and diseases  
Vascular abnormalities underlie the pathogenesis of many ocular diseases. Our research focuses in the lab is to understand the role of noncoding RNAs, including microRNAs and long non-coding RNAs, in vascular biology and vascular retinopathies. (2) Cell death mechanism in degenerative retinal diseases  
We study cell death mechanism with hope to develop new therapeutic solutions for Age-related Macular Degeneration, a leading blinding disease in the elderly. Other – Aging, BioPharma Manufacturing, Regenerative Medicine/Tissue Engineering
Jeffrey K. Wickliffe, PhD
Associate Professor, Global Environmental Health Sciences – SPHTM
jwicklif@tulane.edu
Human cell culture models for genetox, mutagenesis, biotransformation, neurotox, senescence/cellular aging; mouse model for obesity, chemical sensitivity, and increased genetox + cancer risk; signal transduction using complex mixtures in vitro; human population research assessing complex exposures to environmental chemicals and cumulative risks. Other Research Interests include: Cancer/Hematology, Neurosciences, Women’s Health
The research in our laboratory develops novel medical imaging methods to study the dynamics of molecular expression and physiological function by integrating ultrasound and contrast-enhanced photoacoustic imaging systems. A key focus of our imaging technology is the functional and molecular environment during compromised pregnancies which lead to the development of birth defects. Other Research Interests include: Kidney/Hypertension, Women’s Health

Paul DiCamillo, MD, PhD
Assistant Professor, Radiology
pdicamillo@tulane.edu
High resolution magnetic resonance imaging using short echo time techniques tailored to musculoskeletal applications. Characterizing the extent and timecourse of gadolinium deposition in brain parenchyma.

Jeremy Nguyen, MD
Associate Professor, Radiology
jnguye2@tulane.edu
Diagnostic radiology with a focus in gastrointestinal tract, cardiopulmonary and neuroimaging. I am particularly interested in all aspects of liver imaging, and pancreatic-biliary disease. Neuroimaging includes functional magnetic resonance (MR) including spectroscopy and diffusion tensor imaging. I am also interested in mathematical aspects of medical image processing. Other Research Interests include: Aging, Bioinformatics/Statistics, Gastroenterology, Lung, Medical Education, Neurosciences
John Carlson, MD, PhD
Associate Professor, Pediatrics – Allergy/Immunology
jcarlso@tulane.edu
Environmental exposures and asthma

Lucy C. Freytag, PhD
Associate Professor, Microbiology and Immunology
lfreyta@tulane.edu
Understanding the immune responses that occur in animals/humans as a result of infection or vaccination. We are interested in developing needle-free vaccines delivered in the right formulation (i.e. with adjuvants and/or nanocarriers) to induce immunity. We have worked on potential vaccines against fungal (i.e. Candida, Cryptococcus), bacterial (i.e. B. anthracis, Salmonella) and viral (i.e. influenza) infections. Other Research Interests include: Infectious Diseases

Marcelo Kuroda, MD, PhD
Professor, Immunology – TNPRC
mkuroda@tulane.edu
My interests are in AIDS pathogenesis (nonhuman primate model); Innate Immunity (macrophages); Adaptive Immunity (CTL); Pediatric AIDS; TB/SIV model; Aging (Immunology); Innate immune responses (macrophages); Lung Immunology. Other Research Interests include: Aging, Infectious Diseases

James B. McLachlan, PhD
Associate Professor, Microbiology and Immunology
jmclachl@tulane.edu
I am currently studying the role of the adaptive immune response to persistent bacterial pathogens in order to design better vaccines. Other Research Interests include: Infectious Diseases

Andrea Murina, MD
Associate Professor, Dermatology
amurina@tulane.edu
Current education-based research projects include online adaptive learning modules for performance improvement, physical examination using virtual reality. In dermatology, I have interests in melanoma, vulvar diseases, hidradenitis suppurativa, and other chronic inflammatory diseases of the skin. Other Research Interests include: Medical Education
Elizabeth B. Norton, MPH, PhD
Assistant Professor, Microbiology and Immunology
enorton@tulane.edu
My research focuses on promoting a healthy immune system through animal model and primary human cell analyses. Ongoing areas of research include (1) how inflammation alters age-related immunity and vaccine efficacy, (2) how to best protect mucosal surfaces from respiratory infections (flu, TB) and bacterial diarrheal diseases (ETEC), (3) how derivatives from a unique bacterial toxin can act as vaccine adjuvants or anti-inflammatory therapies for gastrointestinal disease. Other Research Interests include: Aging, Gastroenterology, Infectious Diseases

Felicia Rabito, PhD
Associate Professor, Epidemiology – SPHTM
rabito@tulane.edu
My research interests are in asthma epidemiology, specifically the indoor environment. I am currently investigating factors associated with asthma outcome disparities and the influence of environmental (biologic and non-biologic) and social factors. I am interested in new methods of exposure assessment in particular monitoring techniques to measure indoor air pollution and respiratory and cardiovascular health, and novel methods to measure medication adherence in populations with chronic diseases. Other Research Interests include: Behavioral Health

Lesley Saketkoo, MD, MPH
Associate Professor, Medicine - Pulmonary
lsaketk@tulane.edu
Global rare disease registries, Patient-reported outcome development, HRQoL in complex/rare diseases, Mindfulness techniques and impact immunological response, symptom management and HRQoL, Mindfulness and Compassion Training in Medical Education. Other Research Interests include: Behavioral Health, Cardiovascular, Lung, Medical Education
Ronald S. Veazey, DVM, PhD
Professor and Chair, Division of Comparative Pathology – TNPRC
rveazey@tulane.edu
The immunology, prevention, and treatment of HIV infection and AIDS. Current projects involve determining correlates of protective immune responses, testing new HIV therapies and preventatives (microbicides), and examining the immune response to HIV infection in mucosal tissues, including the intestinal and reproductive tracts. I am also examining the pathogenesis of SIV infection in pediatric hosts, and the effects of alcohol use as a cofactor in the susceptibility and progression to AIDS. Other Research Interests include: BioPharma Manufacturing, Infectious Diseases, Women’s Health

Xiaolei Wang, PhD
Assistant Professor, Comparative Pathology – TNPRC
xwang@tulane.edu
My research interests are the immune system of infants, with a particular focus on mucosal immunology. We currently work on tracking & comparing the development of the systemic & mucosal immune systems in the neonates, & study the immune responses to the vaccines & pathogens in infant nonhuman primates. We also seek to understand immune control of virus & eradication of reservoirs to achieve a functional cure in pediatric AIDS patients. Other Research Interests include: Infectious Diseases
**INFECTIONOUS DISEASES**

**Pyone Pyone Aye, DVM, MS, PhD**  
Associate Professor, Comparative Pathology – TNPRC  
paye@tulane.edu  
My research interest is in cellular immune responses, pathogenesis of infectious diseases and substances, drugs, and vaccine effects on HIV/SIV pathogenesis and immunity.

**Jacob Bitoun, PhD**  
Assistant Professor, Microbiology and Immunology  
jbitoun@tulane.edu  
The long-term goal of my laboratory is aimed at developing a safe and effective ST-toxoid vaccine candidate. Since ST is small, it is not immunogenic. We are pursuing conjugation chemistry and other delivery systems to make ST and ST-toxoids immunogenic for inclusion into current pipeline ETEC vaccines.

**James Blanchard, DVM, PhD**  
Professor, Veterinary Medicine-TNPRC  
jblanch1@tulane.edu  
My research interests are related to the use of nonhuman primate (NHP) models of AIDS and other infectious diseases. Clinical interests include minimally invasive techniques and surgical procedures supporting NHP infectious disease research.

**Rudolf (Skip) Bohm, DVM**  
Professor and Chair, Veterinary Medicine – TNPRC  
bohm@tulane.edu  
My overall interest is in the development of nonhuman primate models to support a variety of research programs with emphasis on infectious disease studies. As the Chair of the Division of Veterinary Medicine, I provide oversight for the provision of veterinary medical care for the nonhuman primate breeding colonies and support for research programs utilizing nonhuman primates. We use the rhesus monkey breeding colony for population studies in infectious disease, behavior, and genetics. I direct the Tulane University Laboratory Animal Medicine Training Program which is an American College of Laboratory Animal Medicine recognized residency program. The program prepares veterinarians for board certification in the specialty of laboratory animal medicine.
ERIC DUMONTEIL, PhD
Associate Professor, Tropical Medicine – SPHTM
edumonte@tulane.edu
I am carrying out multidisciplinary studies for the development of new control tools for neglected tropical diseases, ranging from diagnostics, drugs and vaccines, to community based vector control interventions. Other Research Interests include: Bioinformatics/Statistics, Immunology/Allergy/Skin

DAHLENE FUSCO, MD, PhD
Assistant Professor, Medicine – Infectious Diseases
dfusco@tulane.edu
The Fusco laboratory is focused on the mechanism through which type I interferon suppresses RNA viruses, including dengue and Zika virus. We have used functional genetics to identify 56 genes required for IFN-mediated suppression of dengue. We are now evaluating the multi-viral impact and mechanism of action of a subset of these genes, aiming to apply this data toward identification of biomarkers/leads for antiviral development. Other Research Interests include: Genetics, Immunology/Allergy/Skin

ROBERT GARRY, PhD
Professor, Microbiology and Immunology
rfgarry@tulane.edu
My research involves development of modern immunoassays for Lassa fever and diseases caused by other highly pathogenic viruses. We are also developing entry inhibitors for various enveloped viruses, including influenza virus.

AMITINDER KAUR, MD
Professor, Microbiology and Immunology – TNPRC
akaour@tulane.edu
My laboratory is currently pursuing projects on mechanisms of protection against AIDS in natural hosts of SIV infection, natural killer T cells as adjuvants and modulators of immune activation, immune protection against congenital CMV in rhesus macaques, and the early host response to vaccines and SIV infection in nonhuman primate models of AIDS. Other Research Interests include: Immunology/Allergy/Skin
**Deepak Kaushal, PhD**  
Professor, Microbiology & Immunology – TNPRC  
dkaushal@tulane.edu  
We are studying the molecular pathogenesis of Mycobacterium tuberculosis in a highly tractable macaque model. Our interests include the identification of bacillary virulence factors required for survival and persistence in host lesions; systems biology based identification of latent and reactivation TB and the role of miRNA molecules in immunomodulating innate immune response to Mtb infection of phagocytes.

**Patty Kissinger, PhD, BSN, MPH**  
Professor, Epidemiology SPHTM  
kissing@tulane.edu  
Presently I have two R01 awards. In the first, we are working on exploring the origins of repeat infections with Trichomonas vaginalis via an RCT as well as genotyping and conducting susceptibility testing and in the second we are examining the utility and cost effectiveness of screening men for Chlamydia trachomatis on the rates among women as well as mathematically modeling the percentage of men needed to screen to impact women's rates. Other Research Interests include: Behavioral Health, Men's Health, Women's Health, Other – Sexual and reproductive health, substance use, mental health

**Samuel J. Landry, PhD**  
Professor, Biochemistry  
landry@tulane.edu  
We combine biophysical and immunological approaches in vaccine design, with particular emphasis on the relationship of CD4+ T-cell epitope dominance to antigen structure, especially for HIV/AIDS.

**Maureen Lichtveld, MD, PhD**  
Professor and Chair, Global Environmental Health Sciences- SPHTM  
mlichtve@tulane.edu  
My research integrates environmental health, health disparities, disasters, community-based participatory research, women’s health, and environmental policy. I am an endowed chair in environmental policy and Associate Director, Population Sciences, Louisiana Cancer Research Consortium. As Director of the Center for Gulf Coast Environmental Health Research, Leadership, and Strategic Initiatives, my research portfolio encompasses national and global environmental health projects. Other Research Interests include: Women’s Health
Binhua Ling, MD, PhD
Associate Professor, Comparative Pathology – TNPRC
bling@tulane.edu

My research interests are in HIV/immune activation and HIV cure research. Currently, HIV persistence in the central nervous system, the gut and other organs, novel approaches of reducing or eliminating HIV-infected cells, immune correlates of protection in HIV-1 infected elite controllers and long-term nonprogressors, HIV/gut microbiota, HIV/aging and HIV/drug abuse in a nonhuman primate model. Other Research Interests include: Aging, Gastroenterology, Immunology/Allergy/Skin, Neurosciences

Nick Maness, PhD
Assistant Professor, Microbiology – TNPRC
nmaness@tulane.edu

My research interests are focused on T cell-mediated immunity and vaccines against viral infections. Currently, I study SIV-infected rhesus macaques and HIV-infected humans. I also use next generation pyrosequencing to examine virus-induced gene expression changes in the host as well as viral evolution in response to host immune responses. Other Research Interests include: Immunology/Allergy/Skin

Preston A. Marx, PhD
Professor, Tropical Medicine - SPHTM
pmarx@tulane.edu

My research interest are the evolution and emergence of epidemic strains of HIV-2 in West Africa. I also conduct research on anti-viral vaccines, currently HIV and Dengue virus vaccines. I am interested in prevention of STDs to women through the development of anti-viral vaginal microbicides. He primarily uses non-human primate models in his research. Other Research Interests include: Women’s Health

Lisa A. Morici, PhD
Associate Professor, Microbiology and Immunology
lmorici@tulane.edu

Vaccine and adjuvant development; respiratory bacterial infection; wound infection. Other Research Interests include: Immunology/Allergy/Skin
Lina Moses, PhD, MSPH
Assistant Professor, Global Community Health and Behavioral Sciences
lmoses2@tulane.edu
My research focuses on applied public health research, with particular emphasis on implementation of evidence-based interventions for vector-borne and zoonotic diseases at the community level. I'm also interested in human and animal surveillance for zoonotic and emerging diseases, both from traditional indicator-based and community-event based approaches. Other Research Interests include: Behavioral Health

David A. Mullin
Associate Professor, Cell and Molecular Biology – SSE
damullin@tulane.edu
My research interests are in the production of advanced liquid biofuels that can be used in place of gasoline and the development of a new class of antibacterial compounds that I discovered.

David Mushatt, MD, MPH
Associate Professor, Medicine – Infectious Diseases
dmushatt@tulane.edu
My focus is in HIV therapeutics, serving as the local PI for the Tulane site of the International Network for Strategic Initiatives in Global HIV Trials (INSIGHT). In addition, I am working with Deepak Kaushal, PhD at the Tulane Primate Center to develop a non-human primate model of pulmonary M. avium complex infection.

Bapi Pahar, DVM, PhD, MBA
Associate Professor, Pathology – TNPRC
bpahar@tulane.edu
Broad background in cellular and humoral immunology, virology and work experience for over 15 years in macaque model. Research involves determining antigen-specific T and B cell responses in infant and adult macaques in relation to vaccine and infection; understanding the role of intestinal stem cells in regulating intestinal epithelial cell proliferation; mucosal innate immune responses; 3-D primary cell culture; Role of immunoregulatory cytokines in regulating intestinal homeostasis and HIV pathogenesis. Other Research Interests include: Gastroenterology, Immunology/Allergy/Skin, Infectious Diseases
INFECTIONIOUS DISEASES

James E. Robinson, MD
Professor, Pediatrics – Infectious Diseases
jrobinso@tulane.edu
My research is focused on dissecting B cell responses to human and primate retroviruses, dengue virus, and lassa fever virus in naturally infected hosts. We produce human and monkey monoclonal antibodies that define which antibodies mediate activities that might protect against infection. The antibodies define structures that are capable of eliciting protective immune responses. In theory monoclonal antibodies should aid in vaccine design.

Patricia Scaraffia, PhD
Assistant Professor, Tropical Medicine - SPHTM
pscaraff@tulane.edu
My expertise is in insect metabolism, specifically in Aedes aegypti mosquitoes, vectors of dengue, yellow fever, chikungunya and Zika viruses. My research interests include medical entomology, vector control, parasitology, and development, optimization and application of mass spectrometry techniques. My laboratory uses traditional and cutting-edge approaches, including RNA interference, isotopically-labeled compounds and mass spectrometry. We are particularly interested in unraveling the physiological, biochemical and molecular bases underlying the regulation of nitrogen and carbon metabolism in mosquitoes, as well as in discovering new metabolic targets that can be used for the design of better mosquito-control strategies. Other Research Interests include: Metabolism of insects that are vectors of infectious diseases

John S. Schieffelin, MD, MSPH
Assistant Professor, Pediatrics - Infectious Disease
jschieff@tulane.edu
My two main areas of research are 1. Antibody response to viral hemorrhagic fever infections and 2. Natural history, diagnosis and treatment of Lassa fever and Ebola virus disease. Both of these areas of interest involve the development of novel diagnostic platforms and treatment and prevention strategies.
Chad Steele, PhD
Professor and Chair, Microbiology and Immunology
csteele4@tulane.edu
The current goals of my research are to better understand lung immune responses during acute vs. chronic exposure to the opportunistic fungal pathogen Aspergillus fumigatus. During acute exposure, which is an infection model mimicking invasive pulmonary aspergillosis, our major focus is on IL-22. Specifically, we investigate pathways that positively and negatively regulate IL-22 production as well as the antifungal immune pathways induced by IL-22. Themes in this area of investigation include common γ-chain cytokines, innate lymphocytes and eicosanoid biology. An important shift in my laboratory over the last several years has been focused on the identification of inflammatory biomarkers, immune cells and pathways in human diseases that correlate with lung function decline, and bringing these observations back to experimental animal models to provide mechanistic insight (i.e. bedside-to-bench). To this end, during chronic exposure, which is a model of severe asthma with fungal sensitization as well as chronic fungal exposure during diseases such as cystic fibrosis, our major focus is on various inflammatory mediators we have identified in human subjects. Themes in this area of investigation include various IL-1 family members, unique chemokines and chitinases/chitinase-like proteins. Other Research Interests include: Immunology/Allergy/Skin

Deborah E. Sullivan, PhD
Associate Professor, Microbiology and Immunology
dsulliva@tulane.edu
A major research focus of my laboratory is on the pathobiology of human herpesviruses with special emphasis on cytomegalovirus infection of mesenchymal stem cells and placental progenitor cells. We are also studying in the role of stem cells in lung repair and tumorigenesis. Other Research Interests include: Lung, Stem Cell Research

Huanbin Xu, PhD
Assistant Professor, Comparative Pathology – TNPRC
hxu@tulane.edu
My research focuses on correlates of immunity to HIV infection, the immunology and pathogenesis of AIDS, and testing new and novel therapeutic strategies to eliminate viral reservoirs and “cure” pathogenic infection in the highly relevant SIV/SHIV macaque models of HIV infection. His current work is to optimize universal delivery systems for vaccines and drugs, designed to eradicate viral reservoirs by combining new and novel approaches with innovative molecular biology techniques in nonhuman primate models.
Amanda Anderson, PhD, MPH  
Associate Professor, Epidemiology  
aanderson5@tulane.edu  
Dr. Anderson’s major research interests address the epidemiology of kidney diseases, with an emphasis on the causes and consequences of the excessive morbidity and mortality experienced by patients with chronic kidney disease (CKD). She has a particular focus on factors associated with CKD progression including fibrosis measures and the gut microbiome, prediction of kidney function decline over time, and the insufficiently characterized burden of comorbidities and outcomes associated with CKD. Other Research Interests include: Bioinformatics/Statistics, Other - Gut Microbiome, Metabolome, Biomarkers.

Vecihi Batuman, MD  
Professor, Medicine - Nephrology and Hypertension  
vbatuma@tulane.edu  
Renal metabolism and toxicity of myeloma light chains; biomarkers of tubular injury; acute kidney injury–mechanisms, therapeutic strategies; radio-contrast-induced kidney injury; Balkan endemic nephropathy; environmental kidney disease-- lead nephropathy and hypertension.

Jing Chen, MD  
Professor, Medicine – Nephrology and Hypertension  
jchen@tulane.edu  
Etiology, Prevention and Treatment of Chronic Kidney Disease and Hypertension, Cardiovascular Disease in Chronic Kidney Disease, Metabolic Syndrome and Obesity Related Kidney Disease, Vascular Calcification in Chronic Kidney Disease, Diabetic Nephropathy, Gene-Environment Interaction in Chronic Kidney Disease and Hypertension.

Samir S. El-Dahr, MD  
Professor and Chair, Pediatrics  
seldahr@tulane.edu  
Genetic and epigenetic control of renal development. Other Research Interests include: Genetics.
KIDNEY / HYPERTENSION

L. Lee Hamm, MD
Dean, School of Medicine
lhamm@tulane.edu
Acid-base homeostasis – basic mechanisms and clinical disorders; Citrate transport in the kidney related to stones; Sodium transport in the kidney related to hypertension; Cardiovascular disease in Chronic kidney disease; Genetic mechanisms of kidney disease and hypertension.

Kathleen S. Hering-Smith, PhD
Associate Professor, Medicine – Nephrology
khering@tulane.edu
We have significant experience and expertise in epithelial transport biology and cell and molecular techniques using a wide variety of kidney tubule cell lines. Most of these studies have addressed sodium, acid-base, and citrate transport, the latter an important inhibitor of kidney stones. Recently these studies have led to related issues involving diabetes and intermediate cell metabolism. Current techniques involve CRISPER knock-out studies and RNA-Seq. Other Research Interests include: Aging

Suttira Intapad, PhD
Assistant Professor, Pharmacology
sintapad@tulane.edu
I am interested in research related to the developmental programming of chronic diseases, especially cardiovascular disease, and how an improper environment during fetal development such as preeclampsia can result in long-lasting effects on an individual's health. Other Research Interests include: Neurosciences, Women’s Health

Myra A. Kleinpeter, MD, MPH
Associate Professor, Medicine – Nephrology
mkleinp@tulane.edu
Chronic kidney disease education and interventions to improve outcomes in patients with low health literacy and/or from underserved populations. Disaster outcomes in ESRD patients.

M.A. "Tonette" Krousel-Wood, MD, MSPH
Professor, Epidemiology & Family and Community Medicine
mawood@tulane.edu
Aging and Cardiovascular Disease with a special emphasis on adherence. Other Research Interests include: Aging, Women’s Health
Hongbing Liu, PhD
Assistant Professor, Pediatrics - Nephrology
hliu8@tulane.edu
The nephric lineage-specific functions of class I histone deacetylases (HDACs) in kidney development. Other Research Interests include: Genetics

Dewan Syed Abdul Majid, MBBS, PhD
Professor, Physiology
majid@tulane.edu
Elucidation of the intra-renal mechanisms regulating renal hemodynamics and excretory function by endothelial/vasoactive factors. Elucidation of the mechanistic link between Oxidative stress, inflammation and salt-sensitive hypertension. Other Research Interests include: Nitric Oxide, Oxidative Stress, Inflammatory molecules, etc.

Kenneth D. Mitchell, PhD
Professor, Physiology
kdmitch@tulane.edu
My research interests are oriented toward evaluation of the mechanisms underlying the renal functional derangements that contribute to the pathogenesis of angiotensin II-dependent hypertension.

Nazih Nakhoul, PhD, MsC
Associate Professor, Medicine - Nephrology and Hypertension
nakhoul@tulane.edu
I study cellular and molecular mechanisms of renal regulation of acid-base balance and pH regulation. We have identified new mechanisms of ammonia transport in the kidney that contribute to acid excretion by the kidney and we are investigating the role of acidosis as an epigenetic factor. Other Research Interests include: Physiology, Acid-Base

L. Gabriel Navar, PhD
Professor and Chair, Physiology
navar@tulane.edu
Research in my lab consist of studies on experimental hypertension and the regulation of the intrarenal renin-angiotensin system.
Our research is focused on the genetic and molecular basis of hypertension and cardiovascular disorders in a sex- and age-dependent manner. Our long-term objectives are to determine the function of atrial and brain natriuretic peptides (ANP, BNP) that interact with guanylyl cycles/natriuretic peptide receptor-A (GC-A/NPRA) which plays a central role in pathophysiology of hypertension and cardiovascular disorders. We hope to learn the transcriptional regulatory elements and the impact of Npr1 gene dosage globally and in the cell-specific manner in vivo in regulating the blood pressure and cardiovascular disorders. Other Research Interests include: Aging, Cardiology, Endocrine/Bone, Genetics.

Minolfa C. Prieto, MD, PhD
Associate Professor, Physiology
mprieto@tulane.edu

Ryosuke Sato, PhD
Assistant Professor, Physiology
rsato@tulane.edu
We investigate molecular mechanisms underlying regulation of intrarenal renin-angiotensin system. Other Research Interests include: Genetics.

Eric Simon, MD
Professor, Medicine - Nephrology and Hypertension
esimon@tulane.edu
Diuretics in hypertension, aging and kidney function, acute kidney injury, hemodialysis volume assessment.
Federico Teran, MD  
Assistant Professor, Medicine - Nephrology and Hypertension  
fteran@tulane.edu  
I am currently working on developing a mouse model for kidney stone development and how certain electrolyte/compound transport in the kidneys affect the development of kidney stones.

Rubin Zhang, MD  
Professor, Medicine – Nephrology  
rzhang@tulane.edu  
I am interested in identifying new biomarkers of acute kidney injury after kidney transplant. I am studying a group of biomarkers in urine to determine which one is more sensitive and specific for predicting ischemia reperfusion injury, delayed graft dysfunction, graft function recovery and long-term graft survival.
Donald P. Gaver, PhD  
Professor and Chair, Biomedical Engineering – SSE  
dpg@tulane.edu  
My research involves the investigation of biofluid mechanics and biotransport phenomena with a specific interest in interfacial flows and surfactant transport related to the lung. Our research focuses on the microfluidic interactions that may contribute to ventilator-induced lung injury. From this we are developing computational models to elucidate organ-level behavior under pathophysiological conditions. I also am the Director of the Interdisciplinary PhD Program in Bioinnovation, which is intended to bring researchers together from the SSE, SoM and SPHTM to work on translational projects. Other Research Interests include: Medical Devices, Other – Physiological Modeling

Gary Haynes, MD, PhD  
Professor and Chair, Anesthesiology  
ghaynes@tulane.edu  
I am interested in point of care testing for assessment of hemostasis and coagulation as well as the use of non-invasive technology to assess hemodynamic function. Other Research Interests include: Aging, Cardiovascular, Endocrine/Bone, Immunology/Allergy/Skin, Kidney/Hypertension Neurosciences

Thomas Kennedy, MD, MPH  
Professor, Medicine - Pulmonary, Critical Care & Environmental Medicine  
Tkenned7@tulane.edu  
My research involves drug development: 1. 2-O, 3-O desulfated low anticoagulant heparin as a cancer support drug and anti-inflammatory drug. 2. Sulfated and alkylated analogs of hyaluronan for oral health and for interstitial cystitis. 3. Arylated diazenium diloate nitric oxide pro-drugs for human cancer. 4. Thiocarbamate/metal complexes as glutathionylating agents to treat human cancer. I have developed start-up pharmaceutical entities around each of the four families of companies noted above and am in the process of translating to the bedside.
Ross Klingsberg, MD  
Associate Professor, Medicine - Pulmonary Diseases  
rklingsb@tulane.edu  
Corrector/potentiator medications for patients with CFTR mutations and cystic fibrosis. Bronchiectasis and mycobacterial diseases including tuberculosis and non-tuberculous mycobacteria. Anxiety and depression in patients with chronic diseases. Medical education. Pulmonary rehabilitation and exercise therapy. Other Research Interests include: Behavioral Health, Endocrine/Bone, Genetics, Immunology/Allergy/Skin, Infectious Diseases, Medical Education

Joseph A. Lasky, MD  
Professor, Medicine – Pulmonary Diseases  
Section Chief Pulmonary, Critical Care and Sleep Medicine  
jlasky@tulane.edu  
My primary research interest involves basic and clinical aspects of pulmonary fibrosis. A significant component of the basic research program is focused on the role of class II HDACs in fibrogenesis, with an emphasis on the non-epigenetic functions of HDACs. The primary thrust of this work now entails understanding which key fibrogenic signaling events are regulated by lysine acetylation. I also have an interest in the aging lung and so my laboratory is investigating the role of PML bodies in pulmonary fibrosis.

Anil Mishra, PhD  
Professor of Medicine - Pulmonary Diseases & Critical Care  
amishra@tulane.edu  
My research is aimed at deciphering mechanisms of inflammation, primarily based on discoveries concerning innate immunity. In particular, gene-environment interactions in the elicitation of inflammatory states in the respiratory and gastrointestinal tracts are under investigation. Environmental triggers (such as aeroallergens and food allergens) are studied in the context of specific genetic variants (e.g. IL-15 and IL-18 signaling) using population studies (cross sectional and longitudinal prospective cohorts) and mechanism-driven studies. The biological properties of innate inflammatory cells (eosinophils, mast cells, iNKT cells, epithelial cells) and the cytokines (especially chemokines and cell surface receptors) that mediate their function are under investigation. Other Research Interests include: Gastroenterology
Gilbert Morris, PhD  
Associate Professor, Department of Pathology  
gmorris2@tulane.edu  
Modeling lung tumorigenesis in mice; Lung tumor promotion by IL-17;  
Lung disease related to inflammasome repression by cigarette smoke.  
Other Research Interest include: Bioinformatics/Statistics,  
Cancer/Hematology, Genetics

Derek Pociask, PhD  
Assistant Professor, Medicine – Pulmonary Diseases  
dpociask@tulane.edu  
I am interested in the immune responses in the lung. Specifically I am  
interested in how aspects of the immune system can be exploited to  
reduce injury or promote repair during infection or injury. My lab uses  
models of chemical or particle injury (acid aspiration, bleomycin,  
asbestos) and infectious injury (influenza, bacterial). While I am focused on the lung, my  
studies have branched to the liver, gut and thymus. The current major focus in my  
laboratory is the IL-22/IL-22BP axis and how this balance effects the immune response  
throughout the body. Other Research Interests include: Aging, Imaging,  
Immunology/Allergy/Skin, Infectious Diseases, Stem Cell Research

Shigeki Saito, MD, MsC  
Assistant Professor, Medicine - Pulmonary & Critical Care Medicine  
ssaito@tulane.edu  
My research interests include pulmonary fibrosis, acute lung injury, and  
pulmonary hypertension. My current research projects: epigenetics  
(e.g. HDACs, miRNAs) of pulmonary fibrosis and pulmonary  
hypertension. Other Research Interests include: Aging Cardiology,
Noshir Pesika, PhD
Associate Professor, Chemical and Biomolecular Engineering - SSE
npesika@tulane.edu
My research interest lies in developing cartilage mimicking surfaces that can be used in joint replacement devices. We have already demonstrated that we can fabricate polymer surface with a high degree of lubricity by through surface texturing. We would like to partner with a medical doctor so as to move the project to the next step which would involve testing the biocompatibility and durability of the material.

Cedric Walker, PhD
Professor, Biomedical Engineering – SSE
cfw@tulane.edu
Prototyping of new devices for medical research. The Tulane MakerSpace offers digital tools (3D printers, laser cutters, CNC mill and lathe) and training in their use to students, staff and faculty. Most projects are "DIY" but there is a mechanism to hire our student workers for specific projects beyond the scope of the researcher requesting them. Other Research Interests include: 3D printing, prototyping, device design and fabrication
Juan Duchesne, MD  
Professor, Surgery – Trauma Division  
jduchesn@tulane.edu  
We are looking to partner with basic scientists in order to further study the endotheliopathy of trauma resuscitation in patients with severe hemorrhagic shock. We are looking forward to expand the department of surgery collaboration with basic science. Other Research Interests include: Medical Devices, Stem Cell Research, Other - Resuscitation

Kerstin Honer zu Bentrup, PhD  
Assistant Professor, Microbiology and Immunology  
khonerzu@tulane.edu  
Methods of active learning (Med. Ed.); Fluorescent/Light Microscopy, Bacterial Pathogenesis, Three-dimensional Cell-culture Systems (ID)  
Other Research Interests include: Imaging, Infectious Diseases

Geraldine E. Ménard MD  
Associate Professor, Medicine – General Internal Medicine  
gmenard@tulane.edu  
My area of research interest is in hospitalist care, improving transitions of care and reducing readmissions, and perioperative medicine.

Rebecca Schroll, MD  
Assistant Professor, Surgery  
rschroll@tulane.edu  
I am interested in clinical research evaluating outcomes of care in trauma and critically ill patients. My research has primarily focused on pre-hospital treatment as well as operative and perioperative management of trauma patients. Other Research Interests include: Trauma, Critical Care, General Surgery

Isis Smith, MD  
Instructor, Medicine – General Internal Medicine  
ismith3@tulane.edu  
I’m interested in studying medical student’s interested in learning more about underserved populations as part of their curriculum as well as what outcomes and how we can effectively teach them about these topics.
**Omar Raheem, MD**  
Assistant Professor, Urology  
oraeem@tulane.edu  
Interested in Men’s Health focused research including reproductive, sexual and erectile function and reconstructive surgery. Also interested in medical devise and pharmaceutical applications in male related infertility and andrology. Other Research Interests include: Aging, Bioinformatics/Statistics, BioPharma Manufacturing, Endocrine/Bone, Genetics, Imaging, Immunology/Allergy/Skin, Infectious Diseases, Kidney/Hypertension, Medical Devices, Medical Education, Regenerative Medicine/Tissue Engineering

**Suresh C. Sikka, PhD**  
Professor & Research Director, Urology  
ssikka@tulane.edu  
My research and clinic focus is on Aging male related to male infertility, Sexual health, Environmental reproductive toxicology; Forensic applications; Role of Oxidative Stress/Redox Changes and Antioxidants; Sperm safety multicenter studies; Endocrine Disruptors, Prostatic inflammation; and Andropause. Other – Aging, Cancer/Hematology, Stem Cell Research, Other - Andrology - Male Infertility and Sexual Health - Bio-environmental Issues

**Raju Thomas, MD**  
Professor and Chair, Urology  
rthomas@tulane.edu
I have a well-established, diverse research program that focuses on: 1) The mechanisms involved in the regulation of the cerebral circulation in health and disease; 2) The mechanisms of damage to the brain following injury; 3) Therapeutic strategies to restore normal cerebral vascular responses during disease processes such as insulin resistance and ischemia/reperfusion; and 4) Development of methods to protect cells of the neurovascular unit (endothelium, smooth muscle, perivascular nerves, astroglia, neurons, etc.) against potentially lethal stimuli.

Jill M. Daniel, PhD
Professor, Psychology and Neuroscience - SSE
jmdaniel@tulane.edu
I study the impact of estrogens and androgens on the brain and cognition across the lifespan using rodent models. Other Research Interests include: Aging, Women’s Health

Andrei Derbenev, PhD
Associate Professor, Physiology
aderben@tulane.edu
My laboratory investigates the involvement of the brain in the regulation of blood pressure. We focus on synaptic plasticity in the in the brainstem during hypertension.

Stacy Drury, MD, PHD
Associate Professor, Psychiatry and Behavioral Sciences
sdrury@tulane.edu
I am interested in the interaction of genetic and epigenetic factors with early experience and how this interaction shapes neurodevelopment and long term outcomes in children. My research focuses on improving outcomes in medically ill children through providing a greater understanding of the impact of psychological distress, neurocognitive development and family functioning in these children. Other Research Interests include: Behavioral Health, Genetics, Women’s Health
Jonathan Fadok, PhD  
Assistant Professor, Psychology – SSE  
jfadok@tulane.edu  
My research is focused on understanding how the brain controls the formation and expression of emotional memory at the level of defined neuronal circuits. Methods in my laboratory include large-scale in vivo recordings of neuronal activity, targeted manipulations of function in behaving animals, as well as cell-type specific neuroanatomical tracing techniques.

Hai Huang, PhD  
Assistant Professor, Cell and Molecular Biology - SSE  
hhuang5@tulane.edu  
We aim to understand the synaptic mechanisms that support reliable and precise auditory information processing and how noise exposure and hearing loss affect these function, using a combination of techniques including electrophysiology, two-photon imaging, computational modeling, and molecular biology. Other Research Interests include: Imaging

Jenifer Juengling, PhD  
Instructor, Orthopaedics  
jjuengli@tulane.edu  
Development of rehabilitation outcome measures and functional behavioral interventions in the areas of cognition, communication, and dysphagia to utilize in the clinical setting with athletic and non-athletic population who have acquired brain injuries, stroke, and/or neurodegenerative disorders to improve patient daily function and quality of life.

Andrew G. MacLean, PhD  
Associate Professor, Microbiology & Immunology – TNPRC  
amaclean@tulane.edu  
My lab looks at activation and disruption of the blood-brain barrier in health and disease, specifically HIV infection. We specialize in cell biological techniques, including cell adhesion, imaging and activation of signal transduction pathways. These models are being adapted to examine the cell biology of lung inflammation. We are also examining activation of glia in behavioral abnormalities in nonhuman primates and the impact of opioid inhibitors. Ongoing projects include aging, depression and autism spectrum disorders. Other Research Interests include: Aging, Behavioral Health, Immunology/Allergy/Skin, Infectious Diseases
Julie Markant, PhD
Assistant Professor, Psychology – SSE
jmarkant@tulane.edu
My research focuses on interactions between attention and memory systems and the development of neural systems supporting these interactions. I am particularly interested in examining the role of increasing control over selective attention in promoting more effective learning during infancy. I use a convergent methods approach, including behavioral, eye tracking, genetics, and functional MRI methods.

Michael Moore, PhD
Associate Professor, Biomedical Engineering – SSE
mooremj@tulane.edu
The focus of my laboratory is to develop in vitro models of neural growth, physiology, and disease by manipulating the chemical and physical extracellular microenvironment. Toward this end, we employ a number of microengineering technologies such as microscale tissue engineering, novel nanomaterials, microfabrication, digital light projection microscopy, and optical modes of electrophysiological stimulation and recording. We are using these approaches to compare neurons derived from different sources of stem cells for their ability to respond to molecular guidance cues, and we are developing functional models of synaptic physiology, of inflammatory demyelinating disorders, and of peripheral neuropathy. Other Research Interests include: Regenerative Medicine/Tissue Engineering

Ricardo Mostany, PhD
Associate Professor, Pharmacology
rmostany@tulane.edu
Our laboratory studies synaptic plasticity of cortical neurons with emphasis on the effects of aging on the ability to establish and maintain synaptic contacts between neurons. We are applying our results from the aged brain to the study of Alzheimer’s disease using animal models of the disease. We currently have research collaborative efforts with cancer-oriented laboratories studying potential glioblastoma multiforme therapies and the role of tumor suppressors in neuronal function. Other Research Interests include: Aging, Cancer/Hematology, Imaging
Jeffrey Rouse, MD  
Assistant Professor, Psychiatry and Behavioral Sciences  
jrouse@tulane.edu  
As a forensic psychiatrist, my academic interests include neuroimaging of brain regions and networks involved in emotion regulation, the neural mechanisms of meditation and real-time neurofeedback, and the application of biomarkers to forensic risk assessment. Other Research Interests include: Behavioral Health

Laura Schrader, PhD  
Associate Professor, Cell and Molecular Biology – SSE  
schrader@tulane.edu  
The main research interest in my lab involves investigation of regulation of neuronal excitability by ion channels. This research is relevant to normal plasticity processes, such as learning and memory processes such as epilepsy. Techniques include: patch clamp in brain slices, behavioral paradigms, molecular biology and electrophysiology and biochemistry.

Gregory W. Stewart, MD  
Associate Professor, Orthopaedics  
gstewart@tulane.edu  
Concussion, CTE and brain changes, long-term cardiovascular implications in former professional athletes. Other Research Interests include: Cardiovascular

Jeffrey Tasker, PhD  
Professor, Cell and Molecular Biology – SSE  
tasker@tulane.edu  
I am researching the physiological and biochemical properties of brain cells that control pituitary hormone release. Other Research Interests include: Endocrine/Bone, Kidney/Hypertension, Other – Neurophysiology, neuroendocrinology

James Zadina, PhD  
Professor, Pharmacology and Neuroscience  
jzadina@tulane.edu  
Neurobiology of opioids and their receptors. Mechanisms and treatment of acute and chronic pain. Development of novel analgesics with reduced adverse side effects. Other Research Interests include: Aging
My laboratory examines the fundamental relationship between the central nervous system and glucose homeostasis. We identify circuits regulating visceral organs (e.g., brain-liver axis) and focus on neuronal alterations in the hypothalamus and brainstem during diabetic and obese conditions. Other Research Interests include: Endocrine/Bone
Joseph Fuselier, MBA
Assistant Professor, Medicine - Peptide Research
fuselier@tulane.edu

Interested in creating novel therapeutic agents to help patients with diseases where there is little to no innovation or therapeutic benefit with current treatment modalities. My focus is to create intellectual property around these ideas and commercialize them to benefit humankind. My area of expertise revolves around modifying exquisitely potent drugs, conjugating them to peptides and proteins in a way so they are stable in circulation, are targeted to a specific tissue, and then release the biological warhead to the tissue of interest. Synthetic organic chemistry, peptide / protein chemistry, pharmacology, entrepreneurship, and business are all areas of interest. Other Research Interests include: Cancer/Hematology, Gastroenterology, Immunology/Allergy/Skin, Infectious Diseases, Lung, Neurosciences, Other – Pharmaceutical Design, Intellectual Property, Entrepreneurship, Building Businesses in New Orleans.
Stephen Braun, PhD
Assistant Professor, Regenerative Medicine – TNPRC
sbraun@tulane.edu
The intersection of gene therapy and hematopoietic stem cells. Using the rhesus model, we are developing lentiviral vaccine vectors for AIDS and new inhibitors of HIV/SIV viral replication. We are studying transduction of rhesus (mouse and human) CD34+ hematopoietic stem cells prior to expansion and differentiation into dendritic cells. These transduced DCs will be used to vaccinate animals. Other Research Interests include: Immunology/Allergy/Skin, Infectious Diseases, Stem Cell Research

Doug Chrisey, PhD
Professor, Physics and Engineering Physics – SSE
dchrisey@tulane.edu
My research is focused on fabricating engineered tissue constructs by the CAD/CAM direct writing of cells, scaffold, and biomolecules for fundamental and applied research. Past work has included studying disparate cells and environments such as stem cell differentiation, angiogenesis, and neural growth. Other Research Interests include: Cancer/Hematology, Medical Devices, Stem Cell Research

Kristin S. Miller, PhD
Assistant Professor, Biomedical Engineering - SSE
kmille11@tulane.edu
The Biomechanics of Growth & Remodeling Laboratory uses a combined experimental and computational approach to better understand, describe, and predict soft tissue remodeling in response to various chemo-mechanical stimuli including normal processes (e.g., aging and pregnancy), disease, and injury. To this end, our research utilizes model systems with varying restraints on regenerative capability (postnatal development, pregnancy, and postpartum) to define local microstructure and mechanical properties of evolving collagenous tissues to identify potential treatments and the appropriate time course for clinical interventions to prevent maladaptive remodeling, improve adult response to injury, and advance tissue engineering strategies. Our primary areas of research include orthopaedics (tendon and ligament) and women’s reproductive health. Other Research Interests include: Aging, Cancer/Hematology, Endocrine/Bone, Women’s Health
Walter Lee Murfee, PhD
Professor, Biomedical Engineering – SSE
wmurfee@tulane.edu

Our laboratory investigates the multi-cellular and multi-system dynamics involved in microvascular network growth. Specifically, we apply \textit{in vivo}, \textit{in vitro}, and computational bioengineering approaches to investigate the regulation of vascular patterning and the functional relationships between angiogenesis and other processes, such as lymphangiogenesis. Our work provides valuable insight for the engineering of functional vascularized tissues and for understanding vascular dysfunction associated with aging, hypertension, and other pathological conditions. Other Research Interests include: Aging, Stem Cell Research
STEM CELL RESEARCH

Bruce A. Bunnell, PhD
Professor, Center for Stem Cell Research and Regenerative Medicine
bbunnell@tulane.edu
Areas of research/interest: Stem Cells and Regenerative Medicine. My group is interested in various stem cell populations from understanding their basic biology to therapeutic applications. We are currently working on applying stem cells for the treatment of Krabbe’s disease, a lysosomal storage disease that affects the CNS and Multiple Sclerosis, an autoimmune disease. Moreover, we are interested in the role that mesenchymal stem cells play in tumor formation and growth. Lastly, we are currently working on the decellularization damaged or diseased lung tissue and recellularization of the native matrix with stem cells. Other Research Interests include: Aging, Lung, Neurosciences, Regenerative Medicine/Tissue Engineering

Jeffrey M. Gimble MD, PhD
Adjunct Professor, Center for Stem Cell Research & Regenerative Medicine and Departments of Medicine and Surgery
jgimble@tulane.edu
My laboratory focuses on stromal/stem cells isolated from adipose tissue and bone for use in metabolic and regenerative medical studies. Ongoing and recent studies have explored the effects of aging on wound healing processes and the characteristics and differentiation potential of freshly isolated and cryopreserved stromal stem cells. Other Research Interests include: Aging, Endocrine/Bone

Zubaida Saifudeen, PhD
Associate Professor, Pediatrics - Nephrology
zubisaif@tulane.edu
The mechanisms by which changes in nephron progenitor cell metabolism impact cell fate decisions and the efficiency of self-renewal and differentiation. Other Research Interests include: Kidney/Hypertension

Sharven Taghavi, MD
Assistant Professor, Surgery
staghavi@tulane.edu
I am interested in the use of stem cell therapies to mitigate the inflammatory response. In addition, I am interested in the use of large databases to conduct clinical outcomes research. Other Research Interests include: Regenerative Medicine/Tissue Engineering, Bioinformatics/Statistics
WOMEN’S HEALTH

**Cecilia Gambala, MD, MPH**  
Assistant Professor, Obstetrics and Gynecology  
cgambal@tulane.edu  
My interests reside in Women's Health, particularly during pregnancy. Topics of interest include diabetes, hypertension and obesity in pregnancy. Other Research Interests include: Kidney/Hypertension

**Cynthia Hanemann, MD**  
Associate Professor, Radiology  
chaneman@tulane.edu  
My research interests are in breast cancer imaging.

**Emily Harville, PhD, MSPH**  
Associate Professor, Epidemiology - SPHTM  
eharville@tulane.edu  
My research interests focus on social and biological causes of adverse pregnancy outcomes, particularly effects of stress on pregnant and postpartum women and preconception health. I am PI on studies of metabolomic predictors of preterm birth, preconception cardiovascular health, and transgenerational effects on birth outcomes, and am involved with efforts to harmonize data across multiple research cohorts. Other Research Interests include: Behavioral Health, Bioinformatics/Statistics

**Sarah Lindsey, PhD**  
Assistant Professor, Department of Pharmacology  
lindsey@tulane.edu  
My current research investigates how estrogens are beneficial in vascular health. I am particularly interested in membrane-initiated estrogenic signaling events which influence vascular tone and remodeling. Other Research Interests include: Aging, Cardiology, Endocrine/Bone, Kidney/Hypertension
WOMEN’S HEALTH

Mary Mulcahey, MD
Associate Professor, Orthopaedic Surgery
mmulcahey@tulane.edu
I am interested in undergraduate and graduate medical education and I have numerous ongoing projects in these areas (e.g. factors that motivate/deter female medical students from pursuing a career in orthopaedics; Trends in the Sports Medicine Fellowship Match). I am also very interested in women's musculoskeletal health, understanding the MSK injuries/conditions that women are more prone to and why, and identifying opportunities for injury prevention. I am also involved in numerous orthopaedic clinical projects related to shoulder and knee injuries. Other Research Interests include: Medical Education

Amber Naresh, MD, MPH
Assistant Professor, Obstetrics & Gynecology
anaresh@tulane.edu
I am interested HPV-related pre-malignant lesions of the cervix in women. One current projects focuses on improving HPV vaccination rates locally, and another seeks to delineate lifestyle factors associated with HPV persistence in women with low grade dysplasia, with a focus on nutritional factors. This project also seeks to identify novel molecular bio-markers which could help predict behavior of HPV in the genital tract. Other Research Interests include: Infectious Diseases

Bonnie K. Nastasi, PhD
Professor, Psychology – SSE
bnastasi@tulane.edu
The development of culturally constructed psychological theory/conceptual models, interventions, and assessment measures related to psychological well-being (i.e., children’s mental health, youth and adult sexual health) in local and global contexts. Also interested in participatory mixed methods research approaches.

Katherine Raymond, PhD
Professor of Practice, Biomedical Engineering – SSE
kraymon1@tulane.edu
Through collaboration within the Tulane community and with international partners, I am working with other BME faculty to engage students in a biomedical global health initiative. Other Research Interests include: Global Health
Paula D. Zeanah, PhD  
Professor, Psychiatry and Behavioral Sciences  
pzeanah@tulane.edu  
Perinatal, infant, child and pediatric mental health. Current research has focused on relationship of nutritional risk and depression in first time, low income pregnant women.
OTHER RESEARCH AREAS

Henry Bart, Jr., PhD  
Professor, Ecology and Evolutionary Biology – SSE  
hbartjr@tulane.edu  
Ecology, molecular genetics and systematics (taxonomy, phylogenetic relationships) of fishes. Director of the Tulane University Biodiversity Research Institute and Curator of the Royal D. Suttkus Fish Collection (Hebert Research Center in Belle Chasse)

Ricardo Cortez, PhD  
Professor, Mathematics – SSE  
rcortez@tulane.edu  
Mathematical and Computational Modeling of Biological Fluid dynamics

Matthew Escarra, PhD  
Assistant Professor, Physics and Engineering Physics – SSE  
escarra@tulane.edu  
I do research on new photonic materials and optoelectronic devices. This includes metasurfaces that can manipulate light by design and optical devices from 2D materials. These photonic structures are ultra-small and may be used in highly-sensitive sensors, light detectors, light emitters, flat/microscale optics, and more.

Lisa Fauci, PhD  
Professor, Math – SSE  
fauci@tulane.edu  
My research is in biological fluid dynamics. Projects include sperm motility in the reproductive tract and the neuromechanics of locomotion in simple vertebrates.

Robin Forman, PhD  
Provost and Senior Vice President for Academic Affairs  
rforman@tulane.edu  
Dr. Forman’s research, which has been funded by the National Science Foundation, the National Security Agency and the Defense Advanced Research Projects Agency, focuses on combinatorial methods in topology and geometry.
Kimberly Foster, PhD  
Professor and Dean, School of Science and Engineering (SSE)  
klfoster@tulane.edu  
My expertise is on the development of micro mechanical tools for biotechnology. Other Research Interests include: Aging, Regenerative Medicine/Tissue Engineering, Stem Cell Research, Other - Microtechnology, Biomedical Tools

Bruce C. Gibb, PhD  
Professor, Chemistry – SSE  
bgibb@tulane.edu  
Aqueous solutions, the Hydrophobic Effect, the Hofmeister Effect

Chrissy Guidry, DO  
Assistant Professor, Surgery  
cguidry@tulane.edu  
Trauma Resuscitation, Endotheliopathy. Other Research Interests include: Trauma, Critical Care Clinical and Translational Research

Neal Jackson, MD  
Assistant Professor, Otolaryngology/Neurotology  
njackson1@tulane.edu  
Primary interest in human hearing including surgical treatment of hearing loss and chronic ear infections. Interests include any ear surgery, cochlear implants, and skull base tumors. Also interest in vestibular disorders of the inner ear. Other Research Interests include: Aging, Imaging, Medical Devices, Medical Education, Neurosciences, Other – Hearing, Cochlear Implants, Temporal Bone
OTHER RESEARCH AREAS

Olan Jackson-Weaver, PhD
Assistant Professor, Surgery
ojacksonweaver@tulane.edu
The lab has two projects, both related to endothelial cell biology. The first is endothelial cell damage during trauma, in particular damage to the endothelial glycocalyx. The second is the role of protein arginine methylation in angiogenesis. Other Research Interests include: Endothelial cell biology, trauma, calcium signaling, angiogenesis, protein methylation

Carolyn C. Johnson, PhD
Professor, Global Community Health and Behavioral Sciences
cjohnso5@tulane.edu
Public Health, Health Promotion, Obesity Physical Activity Diet

Mary Killackey, MD
Associate Professor and Chair, Surgery
mkillack@tulane.edu
We have multiple areas of research going on in the department of surgery. Transplant, Trauma, Tissue Regeneration, Melanoma, Thyroid Cancer, Resident Education, to name a few.

Jay Kolls, MD
Professor, Medicine
jkolls@tulane.edu
The major goal of Dr. Kolls’ research is to investigate mechanisms of mucosal host defenses in the lung in normal and immunocompromised hosts using genetic models. Presently, his lab is investigating how IL-23 and IL-17 and IL-22 regulate host defense against extracellular pathogens and epigenetic regulation of macrophage function. Additionally, he researches host susceptibility to opportunistic infection such as Pneumocystis and is developing novel therapies against this pathogen. Other Research Interests include: Bioinformatics/Statistics, Genetics, Immunology/Allergy/Skin, Lung

Parisa Kordjamshidi, PhD
Assistant Professor, Computer Science – SSE
pkordjam@tulane.edu
My main research interests are artificial intelligence, machine learning, natural language processing, information extraction and declarative learning based programming.
OTHER RESEARCH AREAS

Alyssa Lederer, PhD, MPH
Assistant Professor, Global Community Health and Behavioral Sciences
alederer@tulane.edu
Alyssa Lederer is a behavioral scientist and health promotion specialist. Her research focuses on the design and evaluation of public health programs, especially in the areas of adolescent sexual health, obesity prevention, and workforce development. She is particularly interested in the intersection between health education and behavior change. Other Research Interests include: Infectious Diseases, Women’s Health, Other – Intervention design, evaluation, sexual health, public health workforce development

Patrick McGrew, MD
Assistant Professor, Surgery
pmcgrew@tulane.edu
Currently researching mass casualty incidents. Interested in ICU delerium, affects of circadian rhythms on ICU drug metabolism. Interested in victim blaming in trauma patients. Other Research Interests include: Trauma, Emergency Surgery, Critical Care

Howard Mielke, PhD
Professor, Pharmacology
hmielke@tulane.edu
The environmental signal we measure is metals in accumulated dusts of communities of New Orleans. We then obtain children's exposure data from the city and state. The combined environmental signal and exposure data is stratified by community and evaluated for patterns and trends. Other Research Interests include: Environmental Signaling in Medicine

Brian Mitchell, PhD
Professor Chemical and Biomolecular Engineering – SSE
brian@tulane.edu
Production, characterization and applications of functionalized silicon nanoparticles. Other research Interest include: Nanostructured materials.
OTHER RESEARCH AREAS

Antonio (Nito) Panganiban, PhD
Professor, Microbiology - TNPRC
apangani@tulane.edu
We're working on virus replication, the host response to virus infection, and anti-viral strategies. Our primary focus is on emerging, zoonotic, minus strand RNA viruses that cause hemorrhagic fever and related pathogenesis. Pathogenesis typically involves infection of vessel endothelial cells and either systemic or localized hemorrhagic fever. The approaches we use include molecular virology, genomics, and transcriptomics.

Mark Wilson, PhD, MSPH
Assistant Professor, Global Environmental Health Sciences – SPHTM
mwilson9@tulane.edu
I'm interested in how obesity impacts chemical metabolism. My primary interest lies in determining if obesity is associated with increased sensitivity to chemicals that are metabolized via the CYP2E1 enzyme pathway. Other Research Interests include: Genetic Toxicology

Ihor V. Yosypiv, MD
Associate Professor, Pediatrics –Nephrology
jiosipi@tulane.edu
Kidney development: Renin-angiotensin system in ureteric bud branching morphogenesis. Other Research Interests include: Kidney/Hypertension
Resource Booklet compiled by:

Rachel Cruthirds, MS
Director of Clinical Research Programs
Tulane University School of Medicine
Office (504) 988-9038
rcruthir@tulane.edu
